Horses With the Toothache.

the jaw, where the sharp points have lacerated the flesh. A file must then be inserted and the points filed down, and in a short time- the animal feels relieved. But this is not actual toothache. The gradual growing of the molars and sharpening of the edges however, leads to it. How can I tell when the horse has the toothache? Why, it's easy enough; you can tell in the manner in which he holds his head. When a horse is affected it goes about with the head down and the lower lip drooping, and if the rein is pulled sharply, the creature is ready to jump and prance. Then again, the eyes are fired, and if the horse is compelled to back by the pressure of the rein upon his teeth, the agony is terrible, and the attention of the driver is thus attracted."

Ancient Form of Dress.

Ancient Form of Dress.

How did we come to possess our present form of dress? This is one of the many questions answered by a reviewer in the Nature. Clothing at first was almost entirely ornamental. The exceptions were such articles as belts from which instruments of various kinds could be suspended so as to be ready for use while the hands were left free. A savage does not enjoy the luxury of a pocket. Even at the present day a Japanese has to sling his tobacco pipe and pouch from his belt, and the only pockets he has are his sleeves. The simple cincture was the germ. so to speak, of the clothing we wear. After some time a bunch of pandanus slips was added in front, and this was gradually extended until it made a complete fringe around the body. When the arts became so far advanced that man could make paper cloth or some woven material these latter were substituted for the primitive fringe, and the kilt was thus developed. Curiously enough, the dress of the Scottish Highlanders embodies these two stages of progress in the kilt and the sporran. As man advanced there were inconveniences attending the use of the kilt, which were abated by fastening that garment at one point between the lega and the human mind was then fairly set upon the path to arrive at the attainment of a pair of trousers. When the back and shoulders needed protection the savage used the skin of some animal, and it is from this sort of covering for the upper part of the body that we have derived our coats, vests, shirts, &c. But the ancient cloak form is even yet retained, not only by such people as Zulu chiefs, but in lar notes. &c. But the ancient cloak form is even yet retained, not only by, such people as Zulu chiefs, but in all robes of ceremony by dignitaries of Court and colleges of the most highly civilized nations on the face of the earth. The elaborate and varied head coverings of the present day all sprang from a very simple original type

Why!

Why do women always stop off horse cars facing the wrong way?
Why do women always—particularly those who hate each other most—kiss when they meet?
Why do Germans with the most unpronounceable names drink less neer than plain Yankee John Smiths?
Why are the wooden forks one

Why are the wooden forks one

tinds in restaurant horse-raddish pots invariably bereft of at least one tine?
Why are blood-curdling storics

of vice, crime and suffering most

Buman Work and Buman

Work means waste, equally to a human body and a locomotive en-gine. "More work, more waste," is a motto alike true of the mechan-Morses With the Toothache.

Horses, like human beings are subjected to the most excruciating toothaches, and it is only within the past few years that any attempt has been made by veterinary surgeons, to allay the pain and extract or-fill the teeth. It is only within a past few years that any attempt has been made by veterinary surgeons, to allay the pain and extract or-fill the teeth. It is only within a past few years that any attempt has been made by veterinary surgeons, to allay the pain and extract or-fill the teeth. It is only within a particular or force derived from and accompanied by an expenditure of one is able to discover when a horse is suffering, and upon what tooth to light would puzzle indeed the phenomenal. Philadelphia lawyer, when suffering from toothache, horses manifest the greatest impatience, and are vicious and unmanageable, and bite and kick continually. Stablemen and managers, at different times, have been badly bitten or kicked by horses suffering from toothache, who at other times are the most docile creatures. The experiments made by veterinary surgeons have been of great practical advantage, and they are gradually getting the matter down to a perfect science.

"What is the mode of treating toothache in a horse?" was asked of a veterinary surgeon the other day.

"Well, they differ, according to circumstances. Sometimes the horse is in the stable and sometimes in the field when attacked, and the processor and on the nose of the and in the operator must use his judgment. Generally, however, a man puts his arm around the horse's head, and with his disengaged hand presses hard on the nose of the and in the operator must use his judgment. Generally, however, a man puts his arm around the horse's head, and with his disengaged hand presses hard on the nose of the and in the operator must use his judgment. Generally, however, a man puts of the frame. Such matters we shortly name food, and the processist in the received of the boss dansens in the Black Crook. In most cases the defective toot
